English

Parallel Approval Process for JIRA

> ⓘ Parallel Approval Process (**PAP**) can be used in the scenarios where the approval process involves multiple approvers. PAP doesn't require specific approval sequence. This add-on enhances JIRA build-in workflow functions.

Main Features

- Approver can be defined based on project roles or assigned manually
- No limits to either the total number of approvers or the approval sequence
- All the feedback will be recorded and tracked properly
- Pending requests and approved requests can be filtered by JQL

Quick Start Guide

Custom Field Configurations(Mandatory) > Screens and Notification(Optional) > Quick start: Define a PAP workflow

- Installation Addon
- Configurations
- Filters and Dashboard
