

Using SVG Chart Macro

Please note that this Macro does not support Internet Explorer browser. Recommended browsers are Google Chrome, Microsoft Edge, Firefox or Safari.

- [Insert chart macro](#)
- [Configure macro](#)
- [Switch chart type](#)

[Examples](#)

Insert chart macro

1. Edit a Confluence page
2. Type `{svg}` or `{chart}` and select SVG chart macro in page editor

- 3.
4. Provide datasource to generate chart:
 - a. [Generate chart from Table](#)
 - b. [Generate charts from CSV file](#)
 - c. [Generate chart from SQL](#)

Configure macro

You can edit SVG Chart macro to define chart type, size, title and more parameters in [Configure macro](#).

Switch chart type

Not available for combination mode

If you have choose to display the menu to switch chart type when setting macro parameters, a toolbar will be displayed on top of the chart to switch among chart types.

Highlighted icon indicates current chart type. Click different icons to switch among chart types.
