

# Configure PAP workflow(Mandatory)

- [Quick start: Define a PAP workflow](#)
- [Advanced PAP workflow configuration](#)

It's not recommended to configure more than one PAP step in a single workflow .

You can refer to [Quick start: Define a PAP workflow](#) to deploy a simple workflow.

## Index

- [Workflow function list](#)

## Workflow function list

### Conditions

- **(PAP) User is in the approver list**

PAP workflow transition button can only be shown when current user is included in the value of 'Approvers'.

- **(PAP) Hide transition**

Hide the transition. Normally it only applies to workflow automation, e.g. When all approvers approve, workflow will automatically move transition to '**Done**' status.

---

### Validator

1. **(PAP)Comment is required**

This is used to validate whether the user has filled in comment. The comment will be copied to 'Feedback' field which setting in post function.

---

## Post Functions

### 1. (PAP) Approve

Execute the '**Approve**' transition in **PAP**.

Once '**Approve**' transition has been executed, current user will be moved from '**Approver**' custom field to '**Approved by**' custom field. When the '**Approver**' custom field value is empty, i.e. all the approvers have executed relevant actions, PAP will automatically move the workflow to next status.

If user has leave message in comment, the comment type will be marked as

**APPROVED** in the JIRA View Issue screen.

Update parameters of the (Parallel Approval Process) APPROVE Function for this transition.

Update parameters of the (Parallel Approval Process) APPROVE Function for this transition.

Approvers Field	Approvers (customfield_10001)
	Users who are waiting for approvers
Approved Field	Approved By (customfield_10002)
	Users who are already approved or declined.
Auto-Transition Action	Done (41)
	When all approvers approved application, transit this workflow action automatically.
Approval Comment Field	Feedback (customfield_10000)
	Approval Comment will be not shown in JIRA issue ,if you are not matched any custom field.

### 2. (PAP) Declined

Execute the '**Declined**' transition in **PAP**.

If user has leave message in comment, the comment type will be marked as

**DECLINED** in the JIRA View Issue screen.

Add Parameters To Function

Add required parameters to the Function.

Approvers Field	Approvers (customfield_10705)
	Users who are waiting for approvers
Approved Field	Approved by (customfield_10706)
	Users who are already approved or declined.
Approval Comment Field	Feedback (customfield_10707)
	Approval Comment will be not shown in JIRA issue ,if you are not matched any custom field.

### 3. (PAP) Feedback

This is only used when adding feedback.

Once executed this workflow function, current user will be moved from '**Approver**' custom field to '**Approved by**' custom field. When the '**Approver**' custom field value is empty, i.e. all the approvers have executed relevant actions, PAP will execute the '**Done**' workflow function automatically.

If user has leave message in comment, the comment type will be marked as

**FEEDBACK**

in the JIRA View Issue screen.
